

SESSION ID: CA1465C

CREO FLOW ANALYSIS AND COMPUTATIONAL FLUID DYNAMICS: DAKTRONICS CASE STUDY

SPEAKER(s): Todd Kraft
CAD Product Manager, PTC

Randy Soukup
Engineering Systems Analyst,
Daktronics

Ryan Bjerkeset
Mechanical Design Engineer,
Daktronics

Wednesday, May 17, 2023

CREO FLOW ANALYSIS

Capabilities

- Three levels: Base, Advanced, and Premium
- Calculate internal/external flows, heat transfer and turbulence
- Particle simulation
- Radiation
- Multi-species and multi-phase simulation
- More

Analyst level
functionality for
Creo users

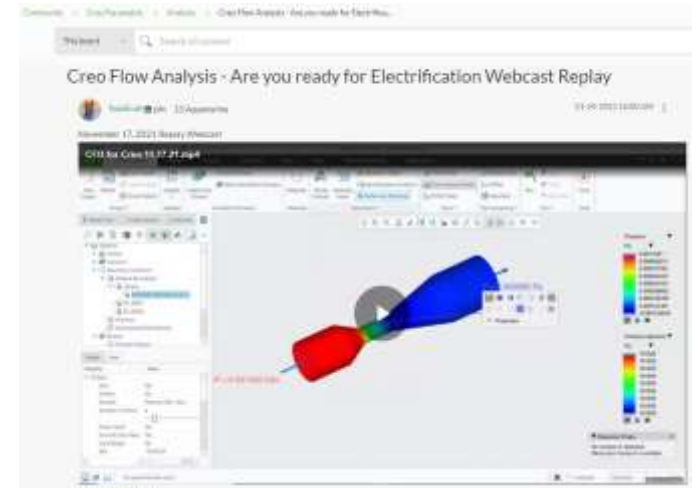

High
performance
solver

Creo 4.0 M040+
Digital fluids into your
PTC Digital thread

Fully integrated in
PTC Creo

CREO FLOW ANALYSIS

- ❑ Significant Development in Creo 9.0
 - Multi-project, usability, behavioral modeling, gyroids, post processing
- ❑ 400+ active unique customers with 1500+ active seats
- ❑ Webcasts – all in PTC Community
 - June 24, 2020 – CFD 101 Video Replay > [CFD 101](#)
 - August 19, 2020 – CFD 102 Video Replay > [CFD 102](#)
 - November 12, 2020 – CFD 201 Video Replay > [CFD 201](#)
 - Feb 17, 2021 – CFA – Evaluating Gyroids and Lattices Video Replay > [CFA Gyroids-Lattices](#)
 - May 19, 2021 – CFD for All Video Replay > [CFD For All](#)
 - November 17, 2021 – CFA – Are you ready for Electrification > [Electrification](#)
 - April 6, 2022 – CFA – Using CFD in Creo to Accelerate Prototypes > [Prototypes](#)
 - November 30, 2022 – Creo Flow Analysis (Creo 9.0) Tips and Techniques > [Tips and Techniques](#)
 - CFA How To Video Series > [CFA Video Series](#)

CREO FLOW ANALYSIS – PACKAGE OVERVIEW

Capability	Creo Flow Analysis	Creo Flow Analysis Advanced	Creo Flow Analysis Premium
Calculate Internal and External Flows	✓	✓	✓
Animate Flow results in real-time	✓	✓	✓
Parallel Processing Simulation	✓	✓	✓
Analysis Types	Simulate Flow	✓	✓
	Heat Transfer	✓	✓
	Turbulence	✓	✓
	Particle		✓
	Radiation		✓
	Species		✓
	Moving/Sliding Meshing		✓
	Cavitation		✓
	Multiphase		✓
	Multicomponent		✓
	Dynamics		✓

Species Simulation - Simulate mixing of **LIQUIDS** with similar density

Multiphase - Used when simulating **Gas and Liquid** together

Multicomponent - Another mixing capability used for multiple **Gases and density**

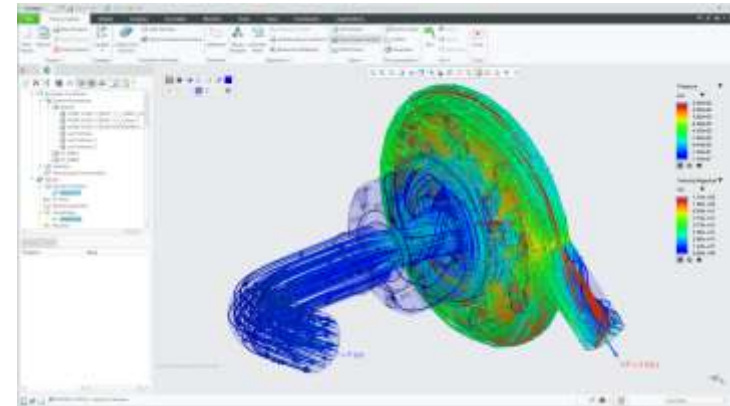

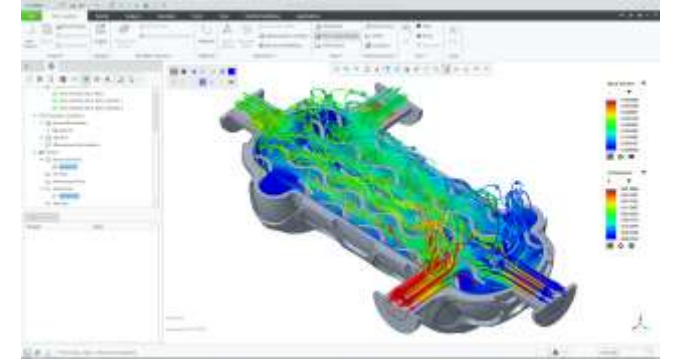

Dynamics - Simulates **FLUIDS and SOLIDS** interaction

Cavitation - Simulates **Vapor, Free Gas and Liquid (bubbles)** compressibility

TOP 5 CAPABILITIES OF CREO FLOW ANALYSIS

1. Fully Associative to Creo and integrated with PTC Digital Thread
2. Mesher Automatic and Body Fitted to Creo - even when fluid volumes rotate and slide!
3. Mesher applies Physics properly, automatic mesh separation and complete system calculations--Fluids, Heat/Thermal, Multiphase. It knows!
4. Fast solve time (due to efficient mesh and fewer solver iterations) and prototype accuracy (in all CFA cases up to 8 cores)
5. Paint in real time on Creo assembly/part/body--priceless!

WE ARE DAKTRONICS

WORLD LEADER

- No doubt you've seen our life's work!
 - Smallest of High Schools to the Largest of Stadiums
 - Convenient Stores to Large Outdoor Metropolitan Areas
 - Metro Stations to Digital Billboards

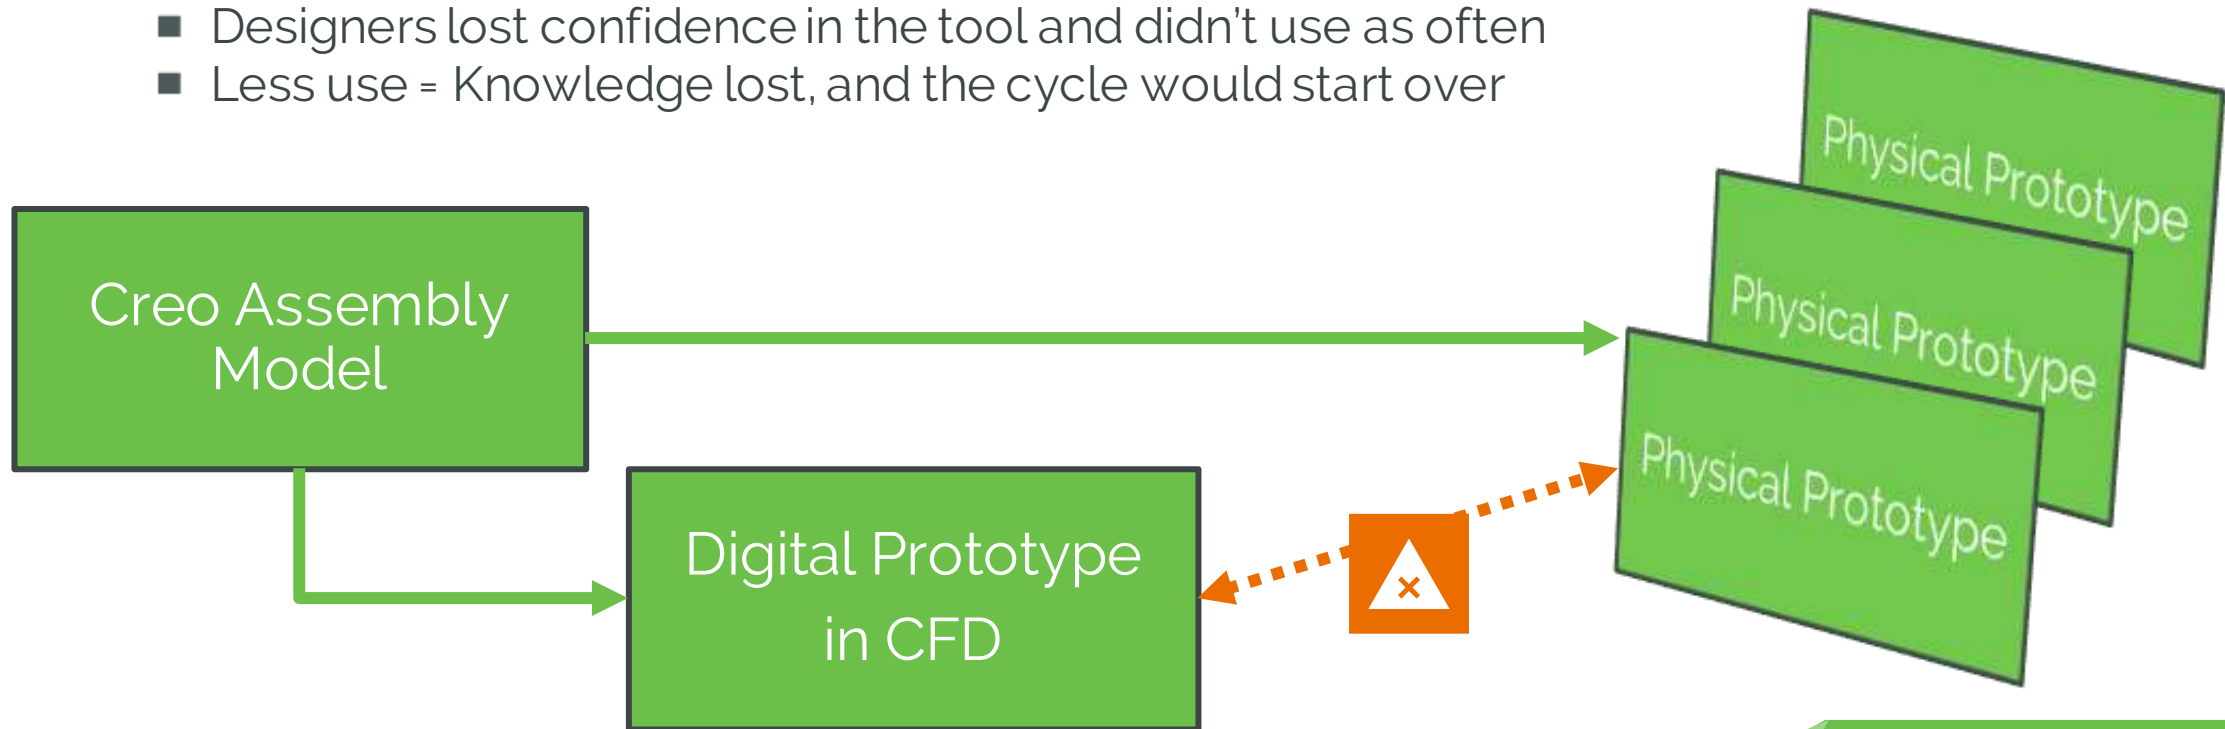

MORE THAN MEETS THE EYE

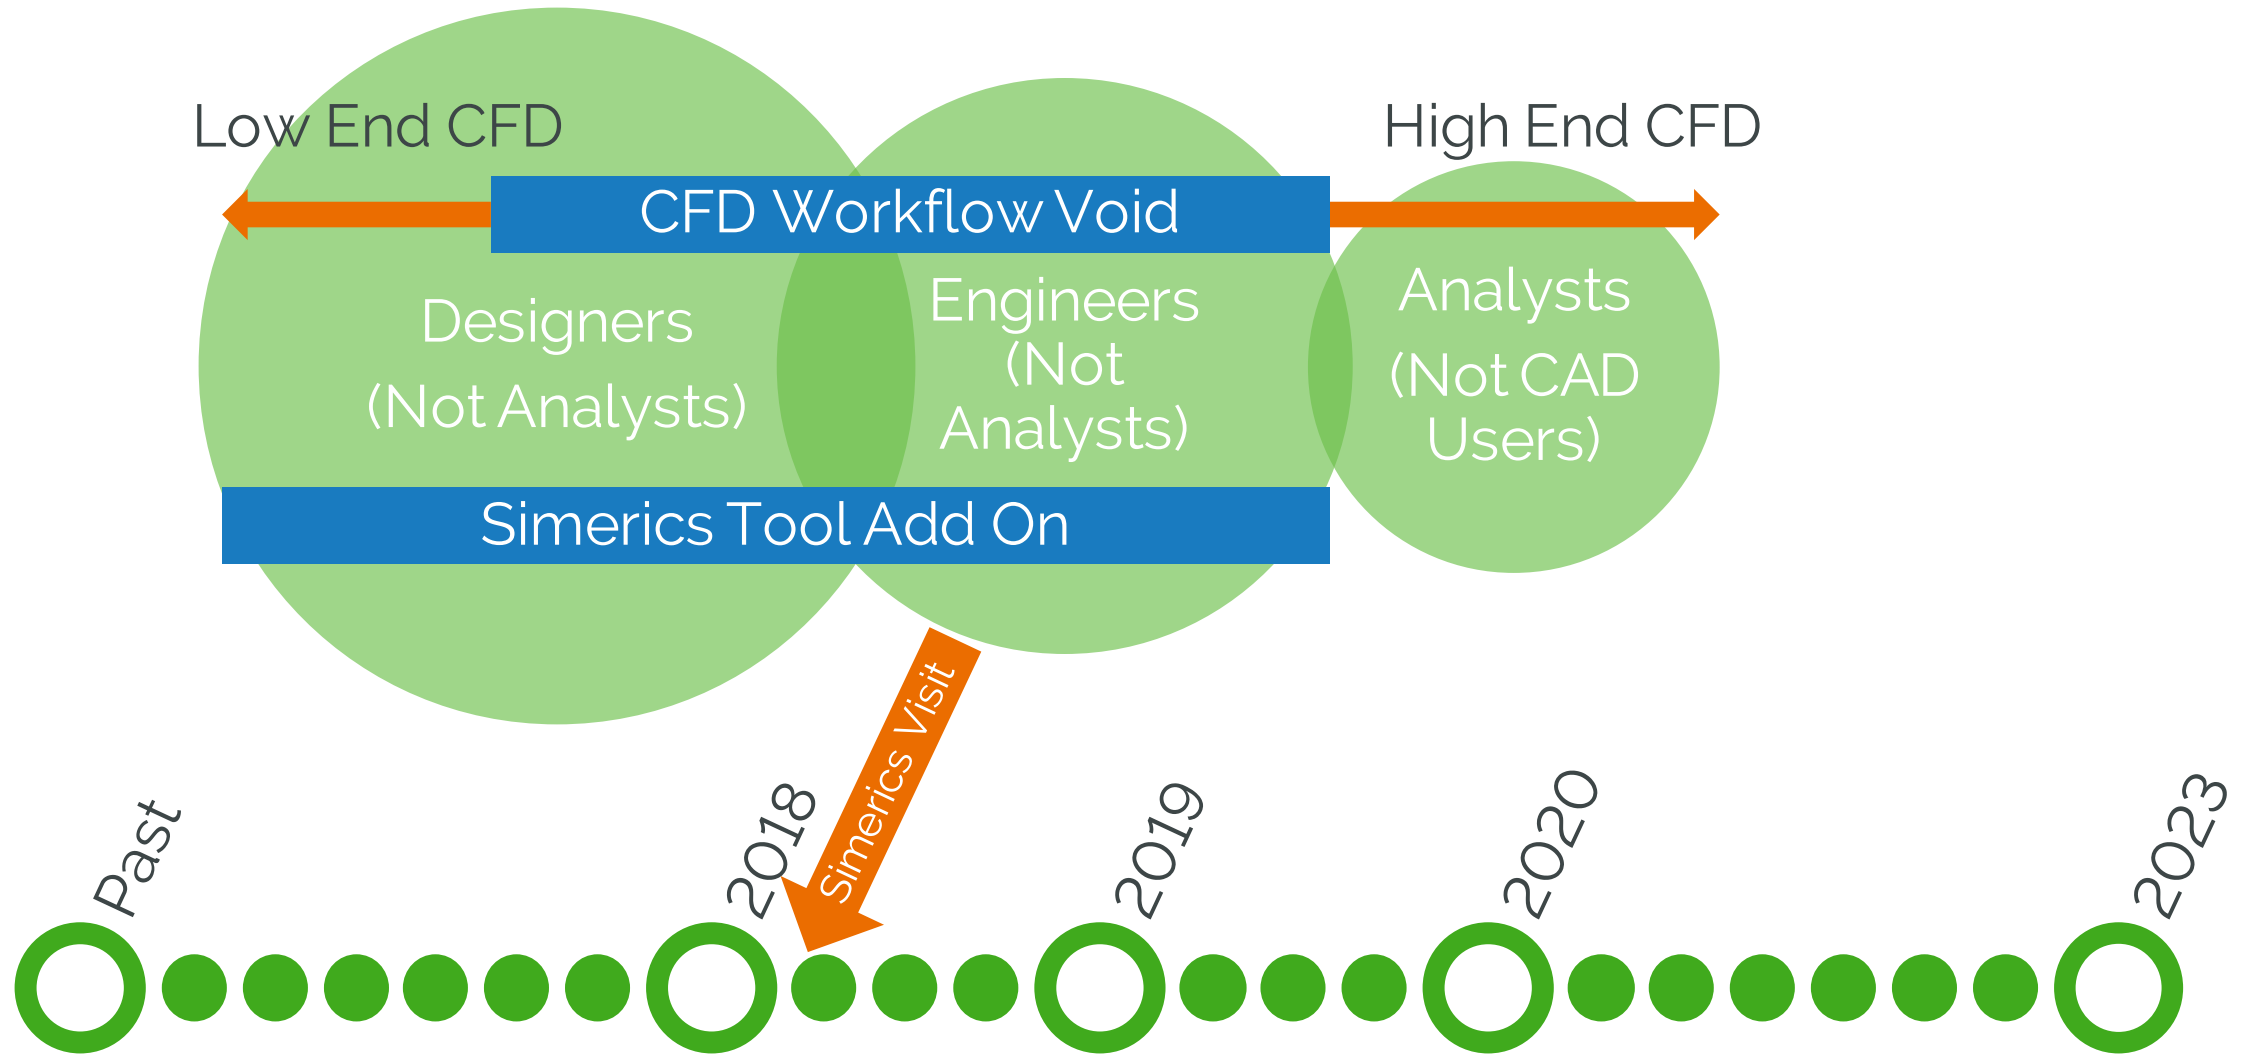

- Most people see the installation and digital content
- Many Design and Installation Considerations to factor in
 - Structural
 - Environmental
 - Power/Signal
 - Heat Management
 - Noise

HEAT MANAGEMENT

- Daktronics struggled to find a reliable CFD Analysis Software
- Lots of Prototyping and Testing
- Autodesk CFD
 - Tough learning curve
 - Results did not match our real-world testing.
 - Designers lost confidence in the tool and didn't use as often
 - Less use = Knowledge lost, and the cycle would start over

EARLY DISCUSSIONS WITH SIMERICS

SIMERICS VISITS DAKTRONICS

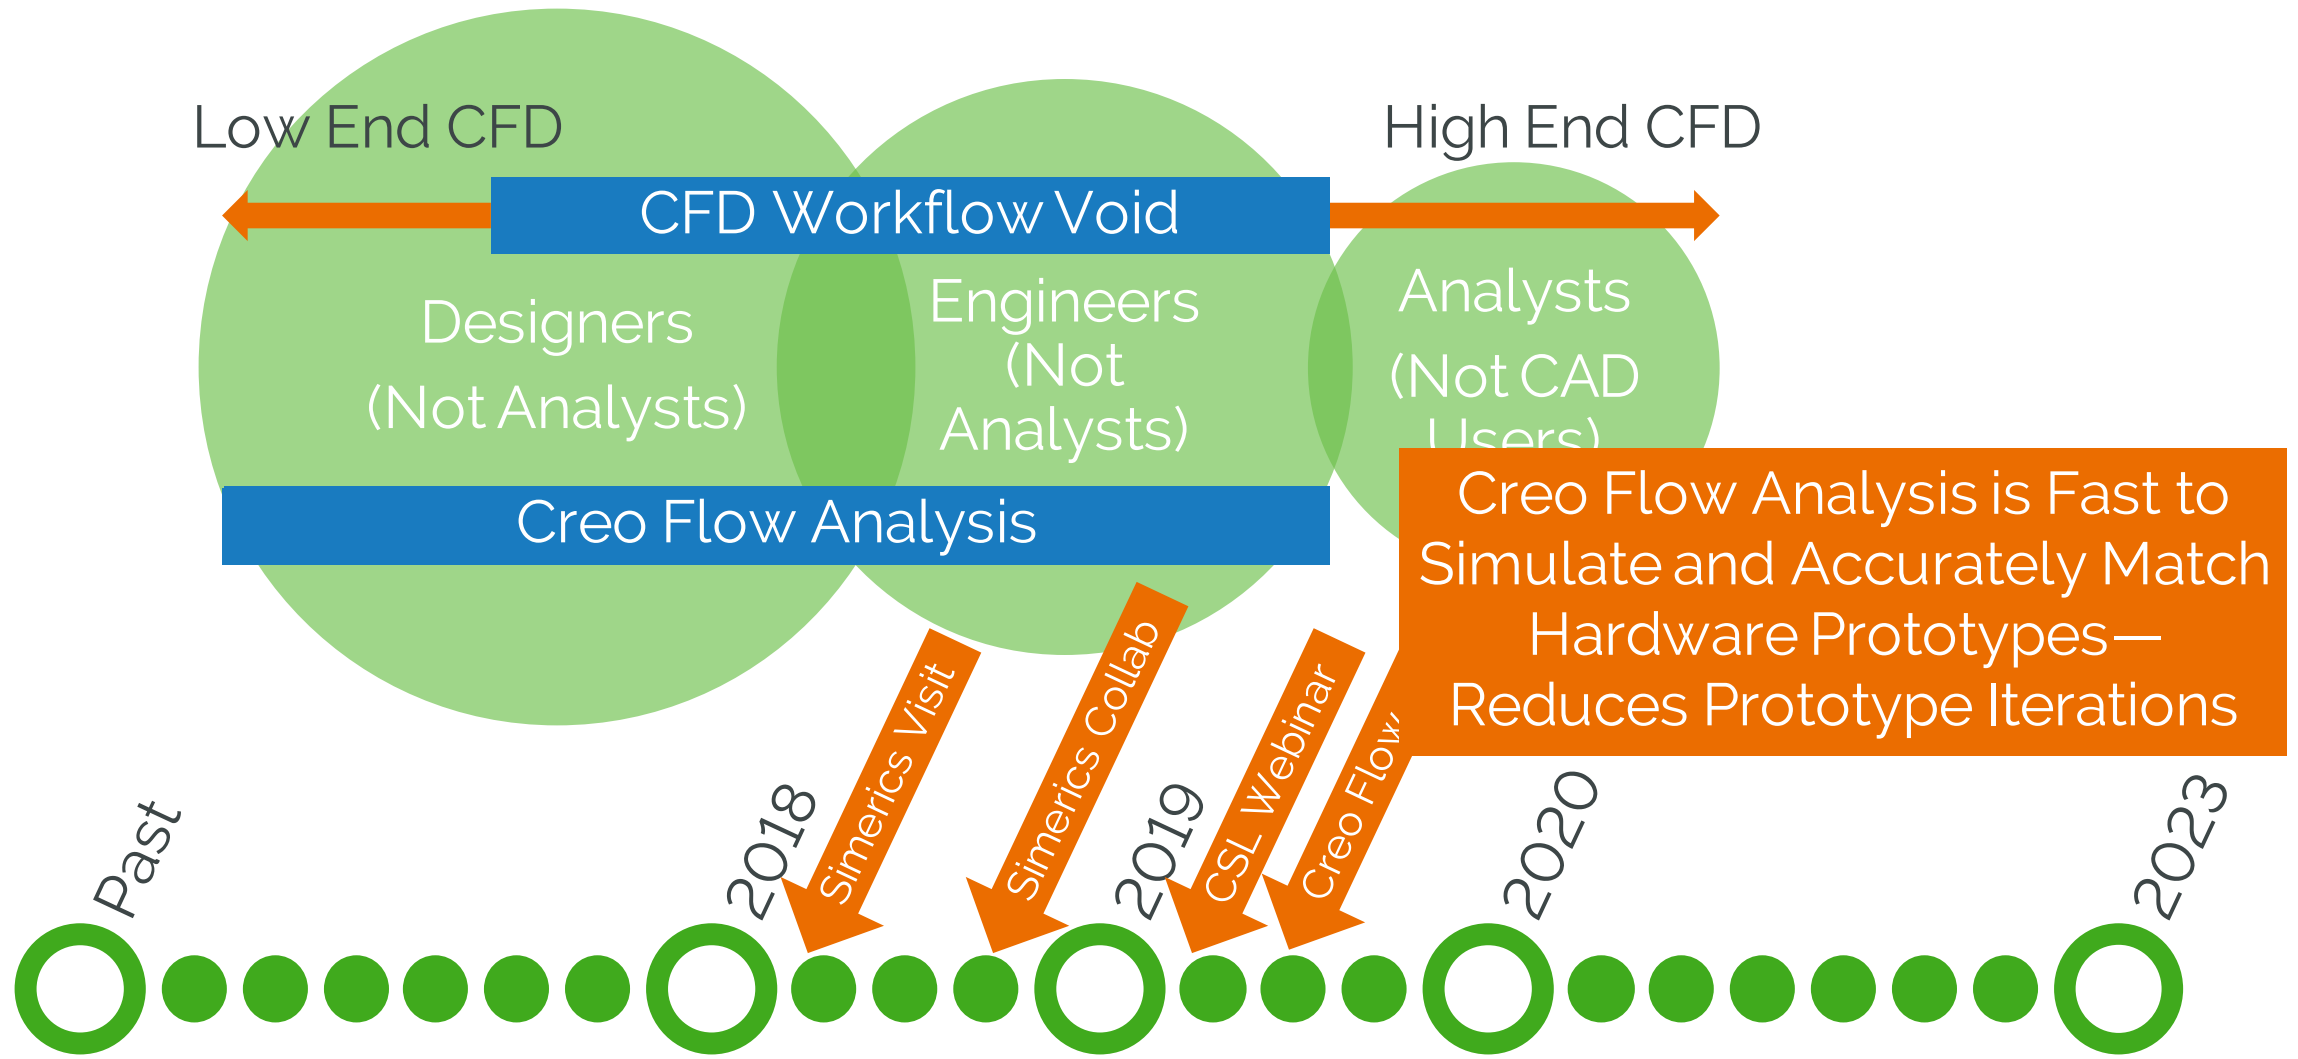

NEW SOFTWARE OPTIONS FROM PTC

- Invited to Participate in CSL Webinar at PTC Headquarters
 - Discussed our usage of the new tool
- While there, discovered two more in the works
 - ANSYS High-End Mechanical Analysis Solution (Creo ANSYS Simulation)
 - Simerics High-End CFD Analysis Solution (Creo Flow)

SIMERICS AND PTC PARTNERSHIP

BENEFITS FROM CREO FLOW

- Need Fewer Physical Prototypes
 - As we learned during COVID, this was a great tool to have
- Easy to Use
- Greater Confidence in the Tool
- Improved Painting
- Incredible Support

DAKTRONICS USE CASES

- Top Creo Flow features that are valued here at Daktronics:
 - Native CAD Files
 - Conjugate Heat Transfer
 - Total Heat Source (W)
 - Solar Radiation (W/m²)
 - Flow Analysis
 - Porous Materials
 - Fan Curves
 - Live Results
 - Quick Solver
 - Easy to Update on the fly

NATIVE CAD

NATIVE CAD

- Previously used Autodesk CFD Simulation
 - Creo file extensions could not be opened directly
 - Errors during exporting
 - Material properties would not carry
 - Accuracy & Unit miss-match
 - Collision/overlapping assemblies were not identified until meshing (usually after material assignments & boundary condition setup.
 - Mesh Failures without explanation
 - No Live Results once the simulation was started
 - Flow direction errors
 - Reversed gravity
 - Missed boundary conditions

CONJUGATE HEAT TRANSFER

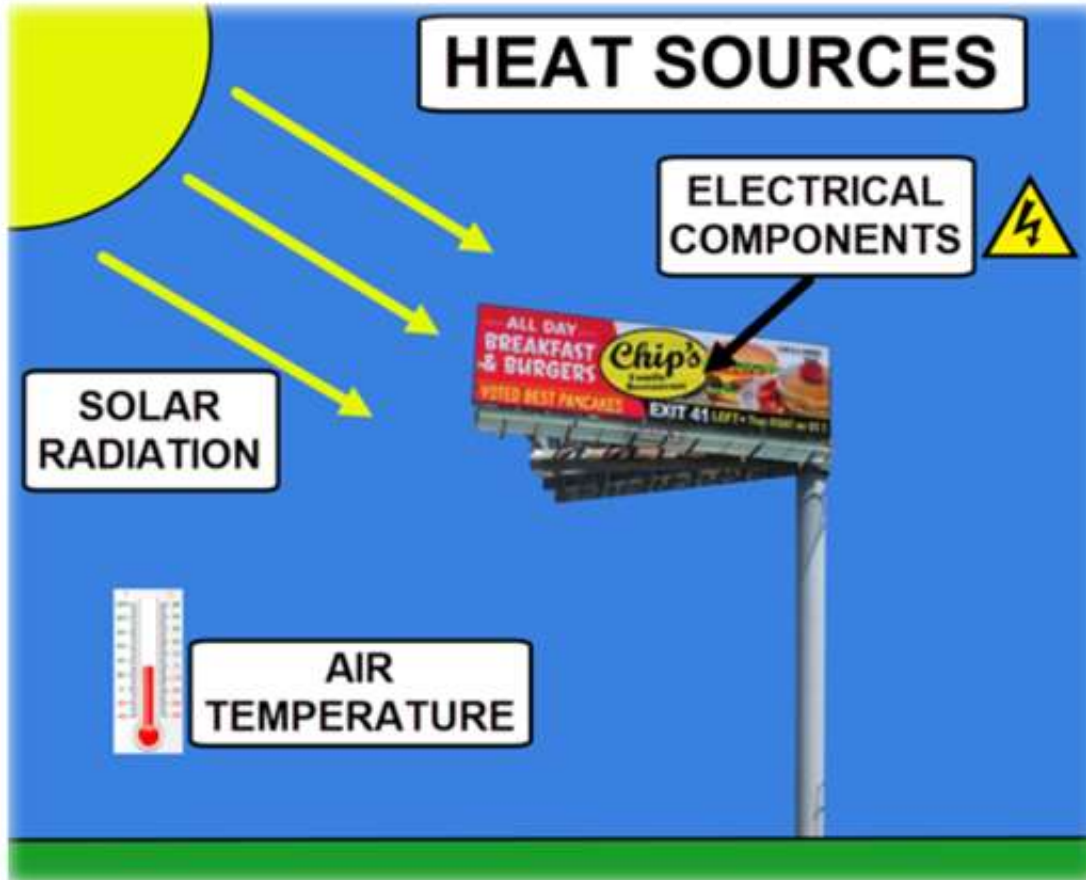

CONJUGATE HEAT TRANSFER

- 95% of Simulations include Conjugate Heat Transfer w/Air Flow Analysis
 - The heat management of electrical components is critical for image quality & reliability
 - Indoor and outdoor environment
 - Prefer natural convection cooling for indoor applications
 - Forced air cooling for outdoor applications
- Indoor Verification
 - Use Benchtop Testing for critical components to verify PCB Material Properties

CONJUGATE HEAT TRANSFER

- Outdoor Verification
 - Verify solar radiation simulations using our in-house solar simulation chamber

FLOW ANALYSIS

SYSTEM FLOW ANALYSIS

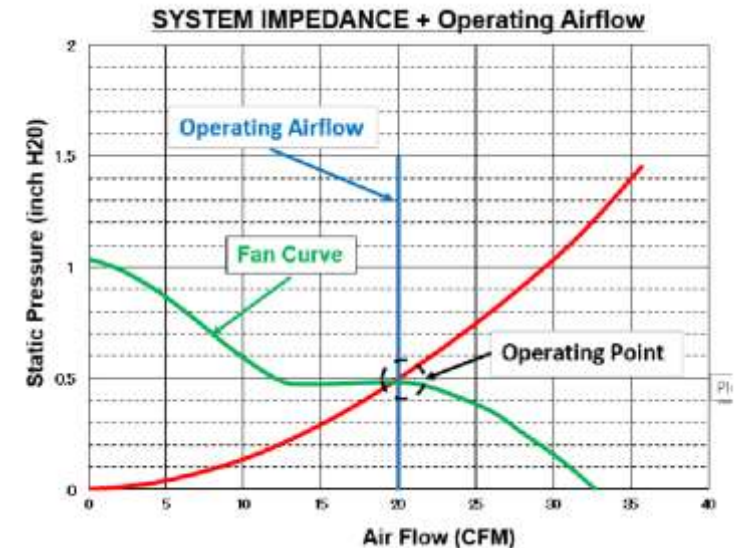

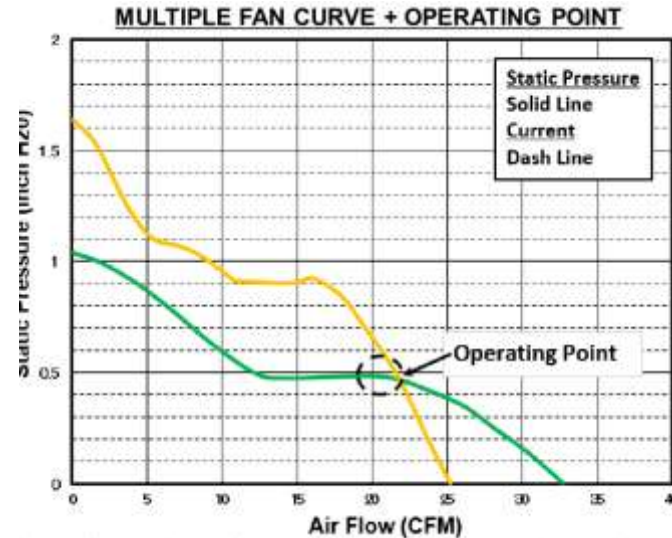

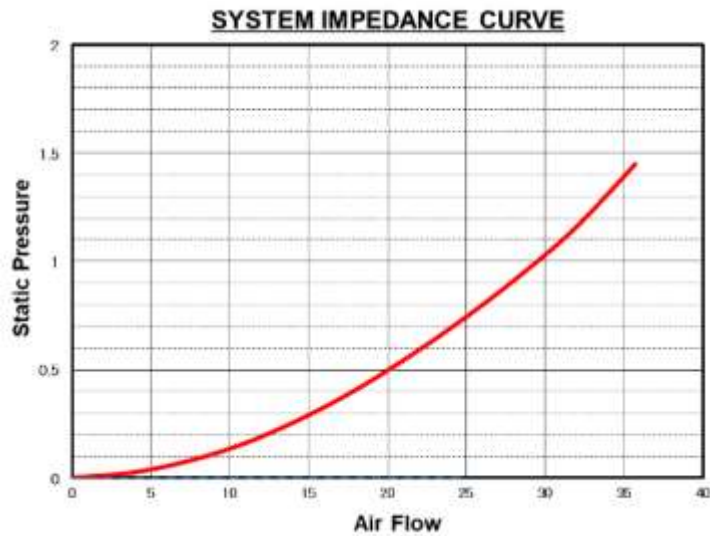

- Fan Curves
 - Provide airflow vs. pressure for a given fan
 - Text file located inside the working directory in Creo
- System Impedance Curve
 - Internal Pressure inside a system (enclosure) vs. air flow
- Goal is to establish best fan curve vs. system impedance to meet our operating point
 - Based on critical component temperature

Characteristic Curves

```

B1072 - Notepad
File Edit Format View Help
<?xml version="1.0" encoding="150-8859"
<table size="10" outside="flat">
# Fan Q-dP curve
# dP = table("B1072.txt",Q)
#Q(LPM) dP(Pa)
0      45
250    37
500    32
750    26
1000   22
1250   20
1500   18
1750   15
2000   8
2250   0
</table>
Ln:20; 100% Windows (CRLF) UTF-8
    
```

POROUS MATERIALS

- System Impedance Curves are affected by blockages/restrictions in system
 - Filters
 - Perforated Air Intakes
- Porous material properties provide simplified method to simulate restriction

- Porosity % 0-1 Scale
 - 0 Fully Open – 1 Fully Closed

LIVE RESULTS

LIVE RESULTS

- ▣ Various design simulations are compared, and the best candidates are moved forward

LIVE RESULTS

- Live Demo

QUESTIONS?

Thank you! You can find me at:
