

What's New in ThingWorx 9.5

Digital Performance Management

- Several customer driven improvements to enable more value through increased adoption across the enterprise. User experience enhancements have been delivered to make the Time Loss Accounting process a more efficient and friendly experience for Operators. The View Loss Insights user experience has been improved to enable Continuous Improvement teams to better interpret and confirm results. Additionally, improvements were made for enhanced data quality and data handling.

ThingWorx Solutions

- Underwent various bug fixes and user experience improvements for overall performance and robustness, along with version alignment to the Platform.

ThingWorx Navigate

- Has been enhanced with functional updates, including a modernized architecture and user experience for the View Design File tasks, and added support for Azure Active Directory as a Central Authentication Server for identity and access management.

Remote Access and Control

- Client has been improved with new functionality to adhere to GDPR requirements with the ability to PIN a GAS Server. The user experience was also improved so that the user can better troubleshoot and understand the status of a remote session.

Software Content Management

- Improved with a modernized architecture to improve overall user experience and administration functionality (with automated deployments) as well as customer driven bug fixes and improvements.

ThingWorx Foundation

- Updated improvements for mashup builder and upgraded enhancements with public/private APIs.
